                                                                                                                 and/or crop protection. The compounds are also useful in screening for and selecting compounds active against parasitic invertebrate species relevant to animal and human health, including worms, fleas, ticks, mites and lice. Heterologous cell lines expressing functional GluCl1 and GluCl2 channel functional forms are useful for establishing functional or binding assays to identify novel gluCl channel modulators. The present sequence is R. sanguineus
                                                                                                                                                                                                                                     The invention relates to Rhipicephalus sanguineus (brown dog tick) L-glutamate-gated chloride channel proteins (GluCl1 and GluCl2) and nucleic acid molecules encoding such proteins. GluCl channel proteins are useful for identifying modulators. The compounds identified as modulators are useful for insecticidal, mitacidal and/or nematocidal treatment for use in animal and human health and/or nematocidal treatment for use in animal and human health
                                                                     Sequence
                                                                                                       GluCl1 protein, T12.
                                                                                                                                                                                                                                                                                                                                                                                                              Novel L-glutamate-gated chloride channel proteins from Rhipicephalus sanguineus for identifying compounds which modulate the channel proteins, which are useful as insecticides, anthelmintics and
                                                                                                                                                                                                                                                                                                                                                              Claim 26; Fig

                                                                                                                                                                                                                                                   The invention relates to Rhipicephalus sanguineus (brown dog tick) L-glutamate-gated chloride channel proteins (GluCl1 and GluCl2) and nucleic acid molecules encoding such proteins. GluCl channel proteins are useful for identifying modulators. The compounds identified as modulators are useful for insecticidal, mitacidal and/or nematocidal treatment for use in animal and human health and/or crop protection. The compounds are also useful in screening for and selecting compounds active against parasitic invertebrate species relevant to animal and human health, including worms, flore as the parasitic modulation and human health, including worms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Brown dog tic

Note: This sequence SEQ.ID.NO.14 is stated to be similar to the sequence shown in the sequence listing. However this sequence lacks N-terminal six residues of the sequence shown in sequence listing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    lepidopteran glutamate-gated chloride channel and this is used, optionally in the form of membrane preparations or recombinant cells, in specific-binding or functional assays for identifying potential insectlicides. The present sequence is Heliothis virescens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            glutamate-gated chloride channel. Glutamate-gated chloride channels are a family of ligand-gated chloride channels unique to invertebrates. The DNA of the invention is used for recombinant production of

Note: This sequence SEQ.ID.NO.14 is stated to be similar to the sequence shown in column 14 of the specification. However this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      glutamate-gated chloride channel. Glutamate-gated chloride channels are a family of ligand-gated chloride channels unique to invertebrates. The DNA of the invention is used for recombinant production of lepidopteran glutamate-gated chloride channel and this is used, optionally in the form of membrane preparations or recombinant cells, in specific binding or functional assays for identifying potential insecticides. The present sequence is Heliothis virescens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The

GABA-gated chloride channel proteins and DNA's are useful for preventing and treating tick infestation, particularly in humans, dogs, cattle, horses, deer, or other wild or domesticated animals. The nucleic acids are useful as hybridisation probes or Polymerase Chain Reaction primers for identifying the presence of Dermacentor variabilis GABA-gated chloride channel nucleic acid or DNA's encoding for a GABA receptor. The nucleic acids are also useful for the recombinant expression of D. variabilis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GABA-gated chloride channel proteins. GABA-gated chloride channel proteins exert toxic effects on other ticks or related parasites such as mites. The present sequence is Dermacentor variabilis clone 8 GABA-gated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gamma-aminobutyric acid; GABA; tick infestation; mite; antiparasitic; GABA-gated chloride channel; recombinant expression; domestic animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        chloride channel protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1; Fig 1; 59pp; English.

GABA-gated chloride channel proteins exert toxic effects on other ticks or related parasites such as mites. The present sequence is Dermacentor variabilis clone 5 GABA-gated chloride channel protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to gamma-aminobutyric acid (GABA)-gated chichannels and their corresponding nucleic acid molecules. GABA-gate chloride channel proteins and DNA's are useful for preventing and treating tick infestation, particularly in humans, dogs, cattle, deer, or other wild or domesticated animals. The nucleic acids as hybridisation probes or Polymerase Chain Reaction primers for the first process of Polymerase Chain Reaction primers for the state of the state 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        identifying the presence of Dermacentor variabilis GABA-gated chloride channel nucleic acid or DNA's encoding for a GABA receptor. The nucleic acids are also useful for the recombinant expression of D. variabilis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New polypeptide useful for preventing or treating tick infestation, humans, dogs, cattle, horses, deer, or other wild or domesticated animals, comprises the Dermacentor variabilis gamma-aminobutyric ac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gamma-aminobutyric acid; GABA; tick infestation; GABA-gated chloride channel; recombinant expressi

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
AAX24372). The invention also provides expression vectors, host cells and methods for recombinant production of CfGluCl-1. Also claimed is a method of identifying a compound that modulates GluCl protein activity which comprises: (a) injecting into a host cell solution a population of nucleic acid molecules (NAMS), at least a portion of which encodes a GluCl protein, such that expression of the portion of NAMS results in an active GluCl; (b) adding a test compound into the solution; and (c) measuring host cell membrane current at a holding potential more positive than the reversal potential for chloride. The products and methods can be used to identify GluCl channel modulators which interfere with
                                                                                                                                                                                                                                                                                                                                   This is the full-length amino acid sequence of CfGluCl-1, a new glutamate gated chloride channel of cat flea (Ctenocephalides felis). The sequence was deduced from an isolated CfGluCl-1 cDNA (see
                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated glutamate gated chloride channels - obtained from Ctenocephalides felis, used to develop products for use against parasites, insects, aphids or nematodes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to gamma-aminobutyric acid (GABA)-gated chloride channels and their corresponding nucleic acid molecules. GABA-gated chloride channel proteins and DNA's are useful for preventing and treating tick infestation, particularly in humans, dogs, cattle, horses, deer, or other wild or domesticated animals. The nucleic acids are useful as hybridisation probes or Polymerase chains Reaction primers for identifying the presence of Dermacentor variabilis GABA-gated chloride channel nucleic acid or DNA's encoding for a GABA receptor. The nucleic acids are also useful for the recombinant expression of D. variabilis GABA-gated chloride channel proteins. GABA-gated chloride channel proteins acids or related parasites such as mites. The present sequence is Dermacentor variabilis clone 9 GABA-gated chloride channel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polypeptide useful for preventing or treating tick infestation, in humans, dogs, cattle, horses, deer, or other wild or domesticated animals, comprises the Dermacentor variabilis gamma-aminobutyric acid (GABA)-gated chloride channel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    chloride channel protein.

The inventuaseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                Sequence
                                                                                                                                                                     The sequence data for this patent did not form specification, but was obtained in electronic at ftp.wipo.int/pub/published_pct_sequences.

encoding mutant invertebrate gamma aminobutyric acid (GABA) receptors Expression of the GABA receptor is used for drug and pesticide screening and for identifying GABA antagonists or agonists. The methods allow large numbers of compounds potentially useful as drugs or pesticides to be screened and to find compounds which overcome existing or potential resistance mechanisms e.g. pesticides which are capable of blocking GABA-gated chloride channels resistant to cyclodienes. (I) may be used to detect mutants by the polymerase chain reaction (PCR) and/or the polymerase chain reaction (PCR) and or the polymerase chain reacti
                                                                                                                                                                                                                                                                                                                                                                                   This invention describes novel purified and isolated nucleic acids (I)

The insect GABA receptor shows critical pharmacological differences from the vertebrate receptor which may result in the development of insect-specific insecticides with greater safety for vertebrate exposure. This sequence represents a variant Drosophila simulans (fruitfly) GABA receptor RIdMD-RR described in the method of the invention.
